

SMART FLOW ELBOWS IMPROVE AIR FLOW AND REDUCE ENERGY USE

February, 2010 — The SMART Flow Elbow was introduced at the AHR Expo last month by Hart & Cooley, Inc. Mr. Gary Fisher, Vice President of Sales, claimed “The New Smart Flow Elbow attracted a lot of attention and will certainly be one of the best new products for this year”. It is the latest energy-saving product to be offered under the SMART air & energy solutions brand.

The patented SMART Flow Elbow forms a 90-degree elbow to provide better airflow and energy savings. Use of this durable elbow support decreases pressure drop by up to 500% over kinked flex duct saving a significant amount of energy costs. The SMART Flow Elbow is the economical alternative to the common practice of using galvanized steel elbows both in terms of material cost and labor savings. Installers can rest assured that it has been rigorously tested and UL-2043 Classified. Furthermore, it's 100% recycled.

The SMART Flow Elbow can be installed with any diameter of flexible duct, up to 16” in both new and retrofit situation, residential and commercial applications. Contact your HVAC distributor to order your SMART Flow Elbows today.
