

## SMART UV LIGHTS

April, 2009 – SMART *air & energy solutions*<sup>TM</sup> introduces its new germicidal UV light system, which helps control airborne germs, viruses, bacteria, mold, odors, gases and allergens commonly distributed by residential and light-commercial venting systems.

Made in the USA, two stainless-steel Duct-mounted light system models are available—the GL136 and the GL236. The GL136 features one 16" Philips UV lamp and comes standard with safety signage, cotton gloves, installation instructions, hardware, and a 9' grounded cord and plug. The GL236 features two 16" Philips UV lamps and comes with the same standard accessories.

The Model GPCO germicidal photocatalytic oxidation grid is offered as an option to the Model GL136 and GL236. Acting as a catalyst when combined with UV-C energy, the GPCO grid fits over the UV lamp and has 19 square inches of surface area. The grid is powder-coated with titanium dioxide and reduces volatile organic compounds and odors as indoor air is circulated.

Also available is the Model GRIK136, a packaged rooftop installation kit that includes a 16" Philips UV lamp, a junction box with safety switch, inspection view port, safety signage, cotton gloves, installation instructions, hardware, and a 6' prewired aluminum flex conduit.

Why are UV Lights important?

- Poor indoor air quality is a top 5 health risk according to the EPA
- High awareness in the consumer market
- Easy to install – in about 15 minutes
- SMART air & energy solutions brand UV lights are a top quality product, backed up with the industry's best warranty - 5 years
